ABSTRACT:

&emsp;&emsp;&emsp;&emsp;&emsp;The present invention provides a novel  
\*\*conjugate\*\* of an antibody with a biological response modifiers;  
delivery system which delivers biological response modifiers to target  
tissues and cells. The present invention also provides a method for  
treating diseases by administering antibody-biological response modifier  
\*\*conjugates\*\*. &lt;??&gt;For example, a monoclonal antibody  
\*\*conjugated\*\* to a \*\*lymphokine\*\* or \*\*cytokine\*\*, such as for example,  
TNF.
